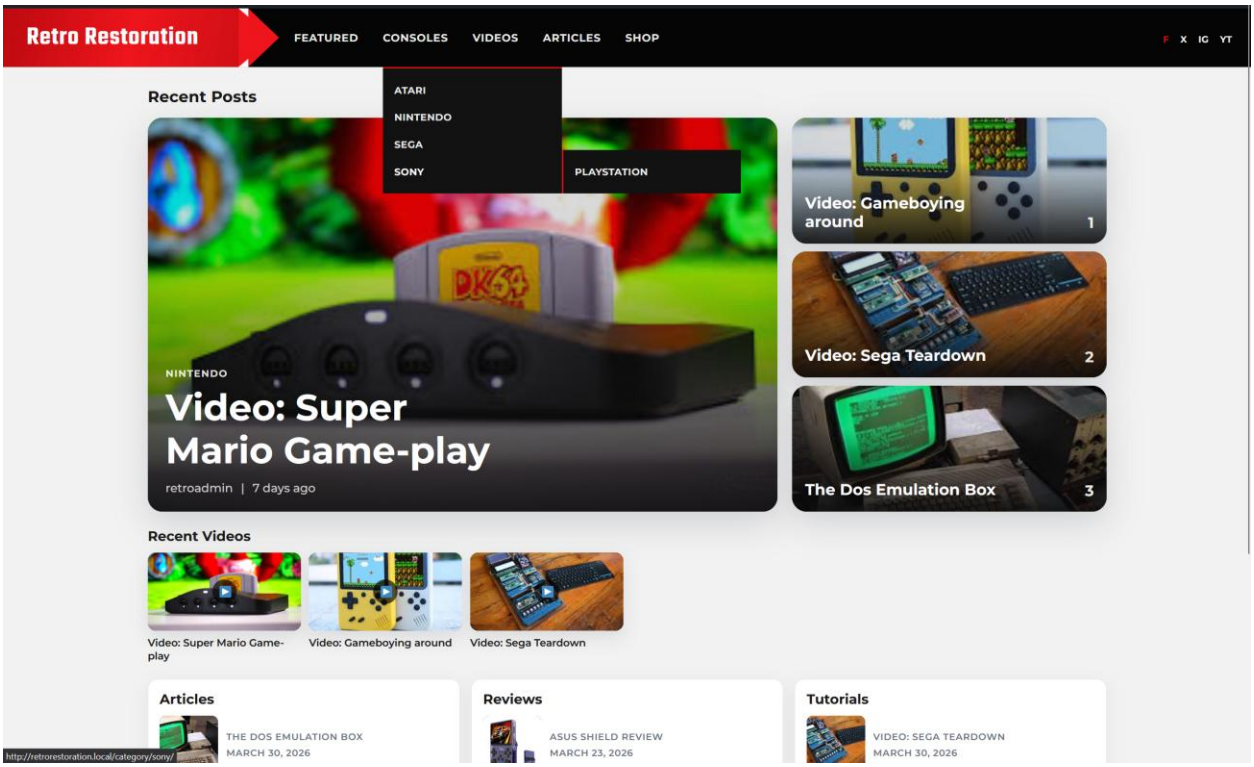
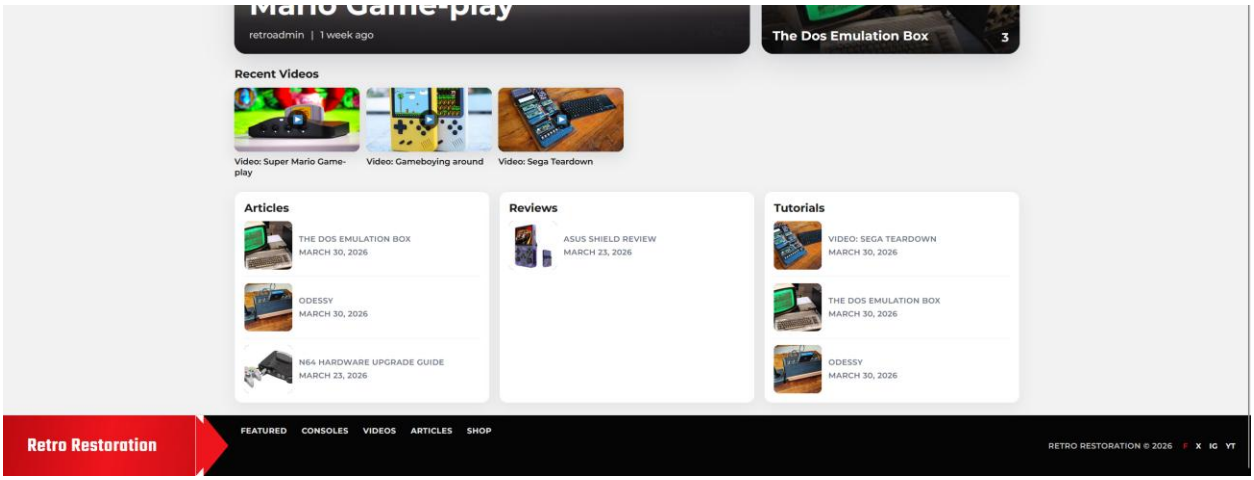
Creative Update

Here is our in-progress update on the retro restoration project. Feel free to provide any feedback on the page designs and theming

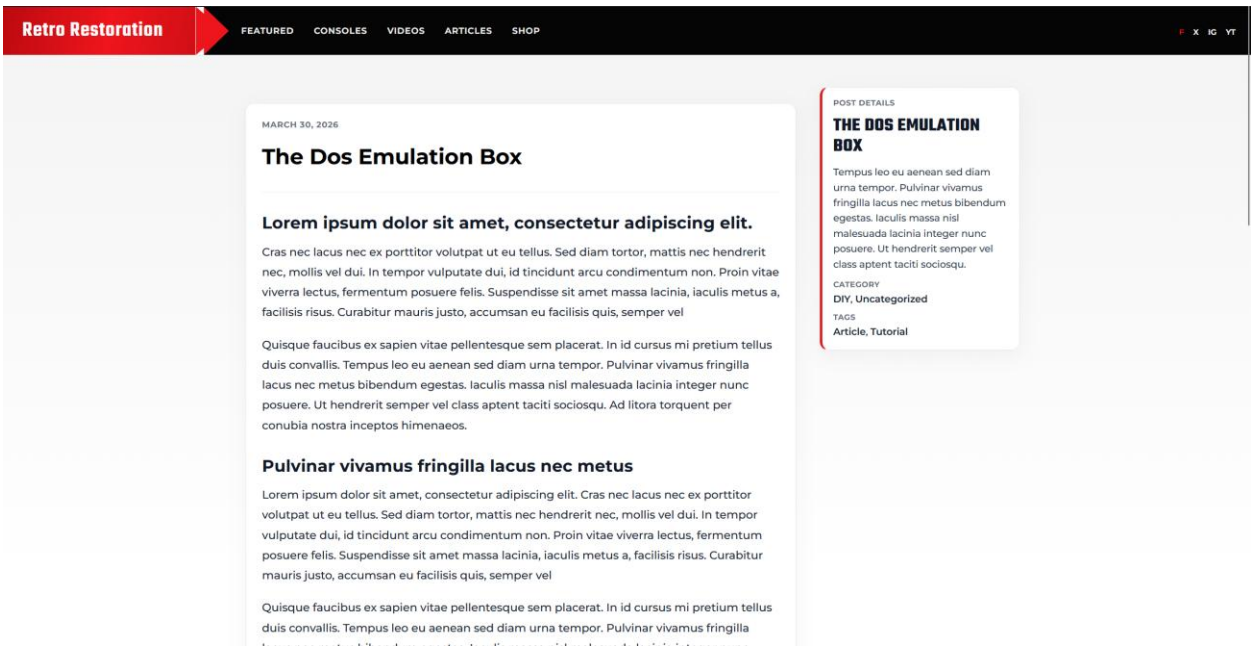
1. Homepage





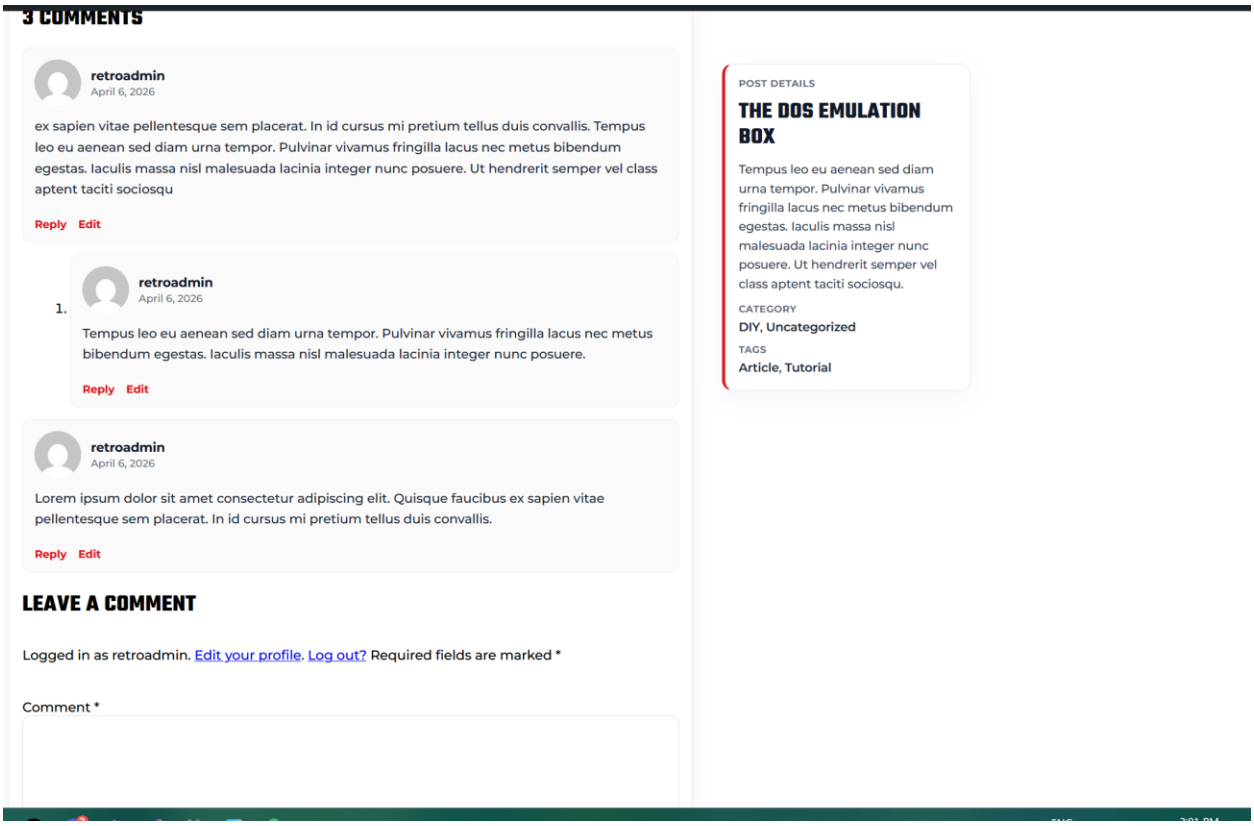
- On the homepage we have implemented a smart nav bar that automatically fills with navigation links for users to find archives are articles or videos grouped by the company, console, or post type they would like to see.
- The Recent posts section displays your recent post in a grid with hover animations
- Below that we have a dedicated video feed for your channel above sorted views of your content broken down by type.

2. Article page



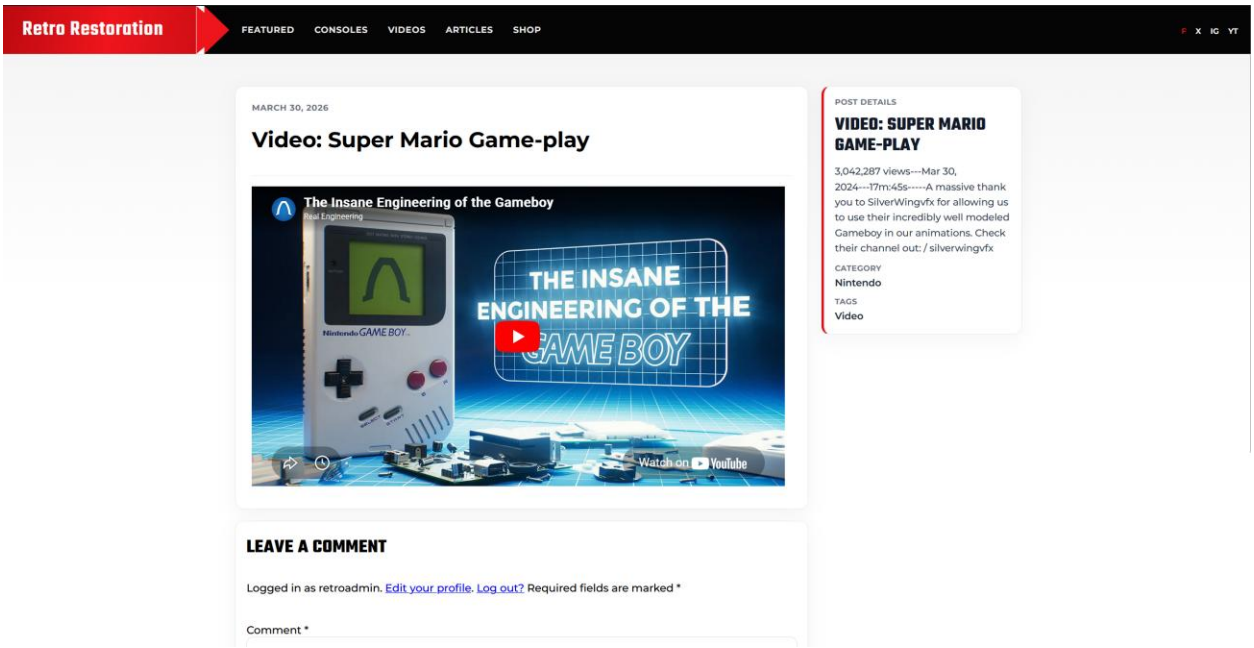
- Simple layout to display articles with floating side par that shows the description and categories/tags of a given article
- for longer articles can be used as as sub-navigation menu

3. Comment Section



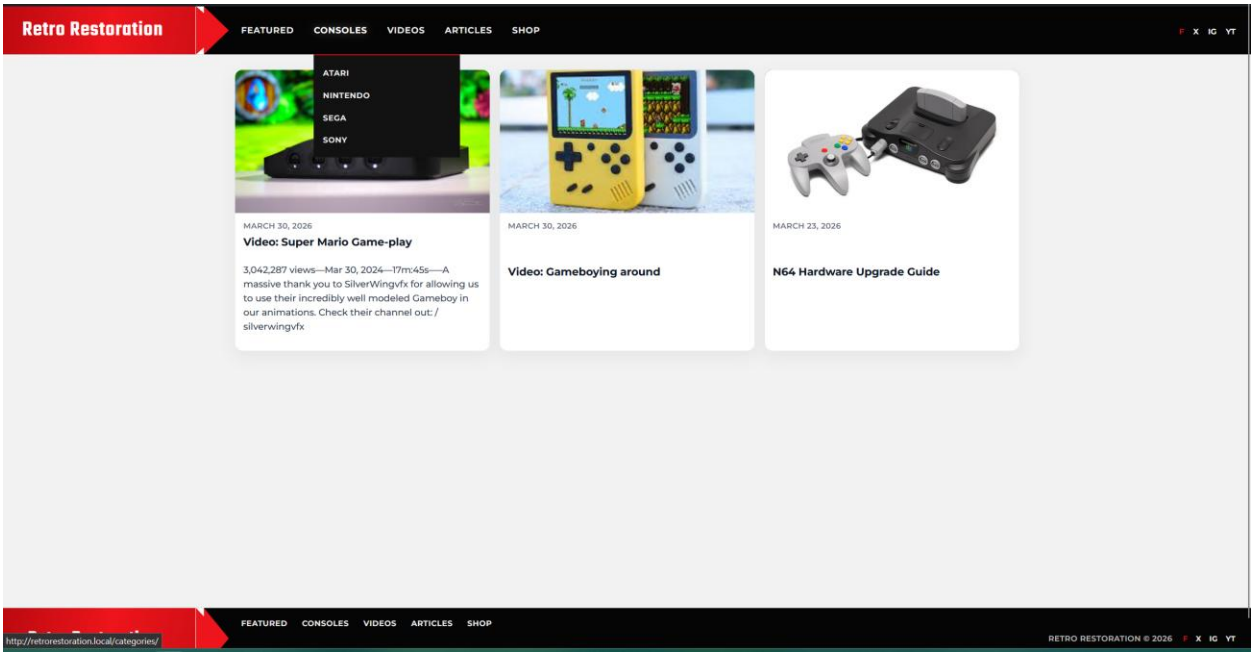
- Comment section available on every article and video. They will display the user's name and profile picture and allow for replies and conversation between users

4. Video Page



- Similar to the article page but with embedded YouTube video preloaded in the post using Embed for YouTube to save on performance
- Side bar is used to show information from video on YouTube

5. Archives



-simple post grid views giving the excerpt information and a preview of all posts that match the company or console.

6. Going Forward

To finish up the blog our main steps are designing the shop experience and the user log-in-profile screens. WE have wireframes available for them but wanted to get your feedback on your visual style or other notes before completing them.

7. Customizations

In addition to the feedback on visual style, if there are any specific companies, consoles, or projects you want us to have featured more prominently on the side please provide us a list to fill. When the project is complete, we will make sure to provide a user manual explaining how to add such customizations yourself, but the more we can do for you before the hand off the better.
