Retro Restoration

Introduction

The Team

Danylo - Backend and Optimization

- Danylo is our Backend and Optimization specialist. He's the one who makes sure everything behind the scenes runs smoothly, focusing on building server systems that are secure, fast, and organized.

Fredy Nguimeya Donfack - Web Application Support

- Fredy serves as our Web Application Support Engineer, equipped with a robust background in front-end development and IT support. He excels at troubleshooting, maintaining, and optimizing web applications and network environments. With a focus on reliability and performance, Fredy's problem-solving skills will contribute significantly to ensuring a stable and user-friendly experience throughout our project lifecycle.

The Team

Daniel Maroy - Documentation & Research

- In the role of Documentation and Research Lead, Daniel employs his strong analytical capabilities and methodical approach to information management. With strengths in technical writing, research, and meticulous attention to detail, he will ensure all project requirements, processes, and outcomes are thoroughly documented and easily accessible to both technical and non-technical stakeholders.

Jack Loder – Project Manager

- Jack is our Project Manager and a 2nd-year Web Development student with diverse experience in various development projects. He utilizes his extensive toolkit to ensure timely and high-quality project delivery. Since joining WDIA, Jack has gained practical experience in front-end design, database management, and secure networking, enabling him to effectively coordinate tasks and foster clear communication throughout the project.

Site Overview

- What is the vision for the site?
- Who are the users?
- How big do we want to go?

Technology
